Don't just read this CV; interrogate it: <https://ask-ravi.vercel.app/> | An AI that answers questions about my work, built by me; code: <https://github.com/rgok001/ask-ravi>

As an experienced Senior Business Analyst and Delivery Lead, I have delivered digital and cloud-based solutions across the government, law enforcement, education, transport, and health sectors. I have worked within Agile development squads across the full delivery lifecycle, from defining business needs and managing backlogs to planning, guiding delivery, supporting implementation and adoption. My background spans modernisation programmes, secure cloud migrations, and IoT-enabled systems, often delivered in security-sensitive and operationally complex environments. I am driven by a strong focus on outcomes and value collaboration, continuous learning, and the purposeful use of technology.

Education

Bachelor of Commerce (Honours)

Second Class Honours, First Division – Specialisation: Operations and Supply Chain Management

The University of Auckland | 2010 – 2011

Bachelor of Commerce

Majors: Accounting and Operations Management

The University of Auckland | 2006 – 2009

Certifications

[Professional Scrum Master](#)

[Certified Scrum Product Owner \(CSPO\) |](#)

[Prince2 Foundation Certified | APMG – International |](#)

[Microsoft Azure Fundamentals \(AZ-900\)](#)

Training and Conferences

[Business Systems Analysis | SoftEd |](#)

[Agile Development Methods | Equinox Learning Services |](#)

[Business Improvement Short Course | University of Auckland Business School |](#)

[Peoplesoft PeopleTools: Rel 8.53 Ed 1 | Oracle University delivered by Asporona |](#)

[Oracle Database 12c: SQL Workshop Edition 1 | Oracle University delivered by Asporona |](#)

[Campus Solutions | Oracle University delivered by Asporona |](#)

Tools and Technologies

JIRA | Azure DevOps | Confluence | MS Visio | ARIS modelling Platform by IDS Scheer | Enterprise Tester | Oracle Peoplesoft Campus Solutions 9.0 | MS Office Suite | Microsoft 365 | Azure | Oracle OBIEE | IBM Cognos | Miro | Mural | Figma

Employment History

Fair Work Commission | Senior Business Analyst | Contract |

Jul 2025 – Present

The Customer Service Platform (CSP) programme is a Microsoft Dynamics 365 and Power Platform implementation that replaces the Fair Work Commission's legacy case-management and email-based systems with a unified platform for managing workplace dispute cases, integrated with a public-facing customer portal. As Lead Business Analyst, I led the BA effort across the programme, including its second major delivery phase onboarding the judicial chambers (Members and their associates).

- Acted as Senior Business Analyst through design and development, facilitating process-mapping workshops with stakeholders across multiple operational teams to define target-state workflows and ways of working.
- Developed and owned the end-to-end user story backlog of 200+ stories across 10 functional areas, covering case routing, automated notifications, document and email generation, and core record lifecycles.
- Defined the underlying data model and process design, including entity lifecycles, results and outcome frameworks, and the business taxonomies used across the platform.
- Applied AI tooling (LLMs) extensively across the role, generating and structuring test scenarios, building reporting automation, drafting documentation and user stories, and converting correspondence templates, materially increasing delivery throughput and individual output.
- Led and coordinated user acceptance testing (UAT) across two business streams: authored a 48-scenario test suite, set up tester access and test data, triaged defects, and guided a ten-person tester cohort through execution.
- Built an automated weekly stakeholder reporting pipeline (Python, Node.js) that refreshed branded PowerPoint reports from exported test data, applying a formal remediation framework.
- Designed and standardised the organisation's email correspondence templates, converting them into structured HTML for the platform's email editor with a consistent token and formatting standard.
- Developed onboarding and training materials for new users, including a platform glossary, practice exercises, and role-based reference guides.

Ministry of Foreign Affairs and Trade | Senior Business Analyst / Security Consultant | Contract |

Apr 2025 – Jun 2025

Returned to the Ministry of Foreign Affairs and Trade, working remotely from Brisbane on a security uplift programme within the Security and Organisational Resilience Division (SORD). The programme modernised the Ministry's mobile device fleet for a high-threat global operating environment, transitioning away from BlackBerry to Microsoft Intune.

- Defined security requirements for the transition of the Ministry's mobile device fleet from BlackBerry to Microsoft Intune, enabling modern, securely managed mobile devices across the Ministry's global post network.
- Partnered closely with the Security and Organisational Resilience Division (SORD) to ground requirements in the real-world risks of mobile device use in high-threat environments.
- Developed tiered security requirements for mobile devices calibrated to different threat levels across global locations, accounting for the capabilities and intent of hostile threat actors.
- Translated threat and risk considerations into practical Intune configuration and device management requirements, balancing security posture with operational usability for staff at post.

[Te Au Reka](#) is a significant digital transformation initiative led jointly by the New Zealand Ministry of Justice and the judiciary. It aims to modernise court and tribunal operations by replacing manual, paper-based processes with a cloud-native, digital case management solution. Built on Microsoft Dynamics 365 and Azure services, the solution is designed to enhance access to justice, improve operational efficiency, and support timely judicial decision-making.

Integration Workstream Lead

- Served as Integration Workstream Lead, responsible for delivering system interfaces between the new solution (Te Au Reka) and existing Ministry systems.
- Led a development squad consisting of a DXC architect, two DXC developers, and a Ministry architect. DXC Technology was the Ministry's implementation partner for the programme.
- Facilitated Agile ceremonies including sprint planning, backlog refinement, stand-ups, sprint reviews and showcases to maintain delivery momentum and team alignment.
- Developed the delivery plan for the Integration workstream, breaking down work into programme increments and sprints. Mapped dependencies and aligned timelines with other workstreams like Data Model and App Delivery to keep delivery coordinated across the programme.
- Facilitated technical workshops between architects from my squad and legacy platform teams to determine required changes to existing systems. Ensured outcomes were clearly documented, agreed, and carried through into planning and delivery.
- Facilitated workshops to determine the network approach for Te Au Reka's Azure resources, balancing security, delivery effort, and programme timelines. Ensured alignment between Ministry, DXC Architects, Infrastructure and Cyber Security, and captured outcomes in the delivery roadmap.
- Reported monthly to the Programme Steering Committee on the workstream's progress, risks, issues, and what was being done to keep delivery on track.

Service Readiness

- Led the development of the support strategy for the new Dynamics 365 case management solution. The Ministry had previously relied on a slow, waterfall-based support model for its legacy system, so we needed a different approach that could support continuous delivery. I introduced a phased model that would gradually build in-house capability, reduce reliance on the vendor, and support ongoing improvements using Agile and DevOps practices. This work became the foundation for the product's future operating model and was endorsed by the Judiciary and approved by the Ministry's Senior Leadership Team.
- Conducted a risk-based analysis and developed an options paper on backup and recovery for the Dynamics 365 based solution, addressing concerns about the 'limited resilience' of Microsoft's new Auckland region, which only offered zonal redundancy. I outlined trade-offs across data security, business continuity, and cost, enabling the Judiciary and the Ministry to make an informed decision aligned with their respective risk appetites.

The Safety Camera Programme is a national initiative to transfer ownership of speed camera operations from New Zealand Police to NZTA and outsource the delivery of mobile speed camera capability to a third-party operator. The programme aimed to enhance road safety outcomes through a modernised, outcomes-based enforcement model, supported by technology and operational transformation.

Mobile Safety Camera Operator RFP

Specifically engaged to define the digital requirements for the RFP

- Defined functional, non-functional, and security requirements for the Mobile Safety Camera Operator [Request for Proposal \(RFP\)](#), including detailed specifications for camera equipment, its roadside operation, evidence handling, and legislative compliance (e.g. Radiocommunications Act 1989).
- Held deep-dive sessions with Service Design, Transport Services, Privacy, Legal, Regulatory, and other stakeholders to gather input and ensure the RFP requirements reflected their specific needs.
- Facilitated an all-hands workshop to validate draft requirements, address conflicting requirements across groups, and gain group endorsement of the final RFP content.
- Acted as a non-voting advisor to the procurement evaluation panel, reviewing all vendor submissions and preparing SWOT analyses focused on the digital solution component.
- Attended deep-dive workshops with shortlisted vendors, reviewed presentations across key topics (e.g. evidence capture, security, roadside camera operation) and provided feedback and SWOT analyses to support the panel.

Mobile Safety Camera Location Management and Scheduling Solution (LMAS)

Led the requirements definition for NZTA's LMAS solution, which underpins the internal planning function for mobile safety camera deployments. The solution allows NZTA to determine where and when enforcement occurs, while a third-party operator delivers the roadside service.

- Facilitated story mapping workshops with stakeholders from Transport Services and Regulatory to define user needs, operational scenarios, and key scheduling requirements.
- Developed end-to-end process maps (using BPMN) to illustrate how enforcement locations would be created, validated, scheduled, and monitored over time.
- Defined scheduling business rules covering enforcement hours, allowed days, session lengths, depot constraints, and scheduling tolerance.

The Digital Workplace Transformation Programme aimed to modernise the Ministry's collaboration and content management capabilities through the implementation of Microsoft 365. Given the Ministry's high-threat operating environment, the move to Microsoft 365 was underpinned by a secure by design approach.

Sensitive Content Migration to Enable Cloud Adoption

Defined and gained approval for a process to migrate sensitive content from the low side to the high side, addressing a critical dependency for the Ministry's Microsoft 365 rollout and ensuring alignment with NZISM (equivalent to [Australia's ISM](#)).

- Facilitated cross-functional workshops with Cybersecurity, Protective Security, Records Management, and Infrastructure teams to define the migration process, including the search criteria, metadata retention, and permissions handling.
- Documented the process using BPMN to support formal review and sign-off.

Intranet and Enterprise Content Management Modernisation

Led the business analysis for the replacement of the Ministry's outdated intranet, previously built on SharePoint 2007, with a modern digital workplace platform.

- Defined the future-state vision and guiding principles for the intranet with the Business Owner (Communications and Digital Manager), focusing on accessibility, usability, and modern collaboration.
- Facilitated workshops and user story mapping sessions to gather and prioritise requirements for the new intranet and enterprise content management platform, based on SharePoint Online, Microsoft Teams, and OneDrive for Business.
- Contributed to improved content governance and user experience design by aligning technical requirements with communications and records management needs.

Exchange Online Security and Compliance Requirements

Defined security and compliance requirements to support the safe implementation of Exchange Online in a high-assurance environment, as part of the broader Microsoft 365 rollout.

- Defined functional and non-functional requirements for Exchange Online, Microsoft Defender for Office 365, and Microsoft Purview, such as SEEMail integration, encryption, classification and labelling, threat protection, data loss prevention rules and conditional access policies.
- Worked with Cybersecurity to ensure Exchange Online met NZISM compliance obligations and was hardened in line with CIS Benchmarks.

Privacy Impact Assessment

- Assessed privacy and data sovereignty risks tied to Microsoft 365 cloud services in consultation with the Privacy Advisor and Legal Counsel.
- Confirmed that mitigations such as Customer Lockbox, encryption, contractual safeguards, and comparable Australian privacy legislation provided sufficient assurance to proceed with platform modernisation without requiring a full PIA.

Programme Implementation Business Case

- Co-authored the Programme Implementation Business Case with the Programme Manager using the Better Business Cases (BBC) methodology.
- Secured funding for the following financial year by clearly articulating the programme's strategic fit, value-for-money, and implementation plan.

Oct 2022 –May 2023

New Zealand Police | Senior Business Analyst | Contract |

The Modern Collaboration Programme (MCP) was a cloud transformation initiative to uplift NZ Police's collaboration and productivity tools using Microsoft 365.

- Proposed changes to M365 licence provisioning to reduce costs and reflect user need. Recommended lower-tier licences (EXO P2, AAD P1) for inactive users and stopping auto-assignment of E5 licences to casual and non-employees.
- Authored requirements for NZ Police's Exchange Online Hybrid architecture.
- Conducted an options analysis for migrating 20 years' worth (170+ TB) of journaled emails from Pre-emptive Vault and Enterprise Vault (EV), balancing technical complexity, evidentiary requirements, accessibility, and cost. Explored options including journal explosion into Exchange Online, a bespoke Azure Cognitive Search solution, and use of shared mailboxes.
- Recommended Exchange Online as the long-term store for journal data. The solution offered potential savings of over \$1M annually by avoiding future upgrade costs.

Served as Lead Business Analyst for a cloud-native roadside enforcement platform hosted in Google Cloud Platform (GCP). The solution used IoT devices including weigh-in-motion (WIM) sensors, automatic number plate recognition (ANPR) cameras, and Variable Message Signs (VMS) to automate heavy vehicle screening at enforcement sites.

- Worked as part of an in-house development squad, consisting of developers, testers, and UX designers.
- Led the definition of user stories and acceptance criteria using Gherkin syntax (Given-When-Then). Worked with the NZ Police Product Owner to translate frontline policing needs into features such as checks for expired Certificates of Fitness (vehicle safety inspections), inactive registrations and unpaid Road User Charges.
- Facilitated agile ceremonies (e.g., standups, refinement, sprint planning, retros and showcases).
- Facilitated cross-functional sessions with UX designers, developers, architects, and testers to align user experience, technical architecture, and requirements.
- Supported the Quality Assurance team in defining test scenarios and validating test coverage against acceptance criteria.
- Supported the external privacy consultant by explaining system functionality, data flows, anonymisation methods, and data retention rules to ensure the Privacy Impact Assessment accurately reflected how personal information would be handled.

Product Owner - CASEY

- Served as the Product Owner for the Regulatory Department's case management solution (CASEY), built on the MS Power Platform (a canvas app with an Azure SQL DB). Defined business requirements and ensured alignment with regulatory needs. Led backlog prioritisation, worked closely with developers, and collaborated with stakeholders to deliver key system functionalities.

Mentorship

- Provided mentorship and guidance to junior Business Analysts, supporting their development through coaching, knowledge sharing, and feedback on deliverables.

Served as Senior Business Analyst within the Architecture and Programme Delivery team, supporting a range of initiatives across line-of-business systems and cloud services. Primary focus areas included the implementation of a recruitment automation solution and the organisation-wide rollout of Microsoft 365.

Recruitment Automation Solution (Springboard)

- Captured requirements through stakeholder (HR, Hiring Managers, EAs) workshops and documented them as user stories and process maps (current state & to-be) to ensure a clear, shared understanding across all users.
- Developed detailed configuration specifications and collaborated with the vendor to ensure the Springboard solution aligned with TEC's specific operational needs.
- Facilitated the testing and refinement of automated workflows with HR and the vendor to validate business process accuracy and approval paths.
- Planned and coordinated UAT, guiding testers to validate key scenarios and managing defect resolution with the vendor before go-live.
- Acted as the primary liaison between business stakeholders and the vendor on product functionality.

MS Teams and SharePoint rollout

- Facilitated technical workshops with stakeholders to define configuration requirements for key M365 services including MS Teams and SharePoint Online.
- Developed the organisational MS Teams Acceptable Use Policy to guide effective and compliant collaboration.
- Executed change management activities for MS Teams adoption, encompassing user communications, readiness assessments, and the development and delivery of targeted training sessions.
- Developed user-focused change communications (e.g., migration guides, FAQs, announcements) to support staff through the adoption journey.

Ministry of Social Development (MSD) | Business Analyst | Permanent |

Jan 2018 –Dec 2019

Availability and Resilience Programme

Supported the strategic uplift of MSD's core digital channels to improve service continuity and resilience. Focused on enhancing the availability of the [myMSD](#) client portal by supporting the delivery of an operational data lake that ingested key backend system data, enabling client transactions to continue during system outages.

- Worked closely with the myMSD Product Owner to identify and prioritise the essential portal functions that needed to stay active for users during backend outages.
- Mapped data flows between core systems and myMSD, helping prioritise datasets for ingestion into the operational data lake.
- Defined the requirements for new microservices (APIs) needed to connect the myMSD portal with the operational data lake. This required close collaboration with the project architects, developers, and the myMSD squad.
- Facilitated quarterly PI Planning sessions for my squad within the Agile Release Train (ART), helping the squad clarify objectives, understand dependencies, and align their plans with the overall programme goals.
- Took on Scrum Master duties when required, leading daily stand-ups, sprint planning, and retrospectives to help the squad maintain momentum and focus on continuous improvement.
- Led the production defect triage process. This involved working directly with the Business Owner to prioritise fixes based on business impact.

CYRAS (Care and Protection, Youth Justice, Residential and Adoption Services)

Worked as a Business Analyst on CYRAS, the Ministry for Children's core case management system, as part of a 'Run and Improve' team, following the establishment of the Ministry for Children. Although the Ministry for Children had separated from MSD, CYRAS remained under MSD support during the transitional period.

- Provided support for the system by reviewing support tickets, confirming expected behaviour, and working with developers to resolve defects.
- Captured requirements using user stories and acceptance criteria for incremental enhancements ensuring the system stayed aligned with evolving frontline practice and legislative changes.
- Carried out Post Implementation Verification (PIV) testing during monthly release cycles to confirm successful deployment of change.

Earlier Career

Victoria University of Wellington Business Analyst (Contract): led the University's Agile SharePoint Online roll-out and a custom research lifecycle management solution.	Sep 2017 – Dec 2017
Davanti Senior Consultant (Contract): assessed marketing-automation readiness for a major petrochemical distributor and shaped a phased implementation roadmap.	May 2017 – Sep 2017
University of Auckland Business Analyst (Permanent): part of the University's first Scrum squad redeveloping its website; also led the CommunityForce scholarship system upgrade.	May 2015 – May 2017
Beca Consultant (Permanent): led ICT asset management plans for DIA (Passport, VIP Transport) and process improvements on an Auckland Council secondment.	Apr 2014 – May 2015
HealthAlliance Business Analyst (Permanent): introduced system-based inventory management across Waitemata and Counties Manukau DHB theatres and wards using Oracle Inventory Management.	Dec 2012 – Apr 2014
NorthPower Process Analyst (Permanent): mapped end-to-end operational processes to identify inefficiencies in the utilities sector; first analyst role.	May 2011 – Dec 2012

LinkedIn Recommendations

Martyn Bayly | Cybersecurity Strategy and Governance Manager and Programme Security Advisor at the Ministry of Foreign Affairs and Trade

I have known Ravi for approximately one year as he was a vital member of the Programme Team, specifically assigned to the Digital Workplace Transformation Programme. Ravi's role required him to navigate the complex security structures and highly demanding stakeholders in the organisation.

I was consistently impressed by his ability to analyse critical issues including security, effectively communicate requirements, and solve intricate problems.

Ravi also excelled in building strong relationships with colleagues and stakeholders, showcasing his capability to manage relationships even in a challenging, complex environment. His technical proficiency and analytical skills, as well as his relationship management skills, make him a true asset for programme teams navigating complex projects.
